

Align Inventory with Real-time Demand

StockWise

Powered by
SAP HANA®

Inventory Insights Predictive. Actionable. On Demand.

A lapse in inventory management can result in customer dissatisfaction and monetary loss to the retailer. It is estimated that globally the revenue loss to retailers is \$1.1 trillion annually due to inventory distortion*.

With millions of SKUs in stock, ensuring availability of the right product in the right place at the right time can be a challenge. While point of sale or inventory management softwares allow a retailer to capture sales data and inventory movement, it may not provide real-time insights.

The StockWise Promise: Higher Inventory Turn

- Reduction in working capital
- Increased sales through improved availability
- Cost savings through reduction of purchase
- Transparency across the supply chain
- Better Decisions, Faster

**7 days historical data is all that is needed to
get started**

Business Challenges

- Stock out & excess stock are most common issues faced in retail
- Businesses are unable to meet customer demand, resulting in lost sales and reduced customer satisfaction, due to stock-out
- Working capital is locked in excess stock, adversely affecting profitability
- The effects on the business range from lost customers to store closures

Key Features

- Advanced predictive algorithms
- Real-time stock shuffling recommendations
- Everyday dynamic prediction at granular level
- Daily actionable dashboard
- Non-intrusive solution and easy integration with any ERP
- Mobility
- What-If analysis

Increased sales though improved availability

StockWise provides daily insight of stock (on hand) and stock outs, how much to order and possible loss of sale, which leads to better availability of stock. Better availability of stock results in enhanced sales and customer satisfaction.

Reduction in working capital

StockWise identifies excess inventory across the supply chain and recommends reshuffling of stock, providing the exact quantity at store and SKU level. This reshuffling helps the retailer reduce wastage and earn more.

Visibility across the supply chain

StockWise provides a single view of data across the hierarchy and ensures complete transparency which can result in streamlined remedial action.

Mobility

Real-time, actionable insights are available to all, with choice of device like Mobile, Tablet or PC.

Better Decisions, Faster

The StockWise Predictive Analytics Engine provides, real-time analytics and insights into daily stock at the store, right down to the SKU level. Inventory levels are monitored and re-order levels adjusted in real-time. Improved sale by stocking the right SKU's in the right quantity in the right place. The precise and continuous visibility helps retailers in quick decision-making.

Easy Integration

Easy integration with SAP, JDA, Oracle or any other ERP with a CSV data file which can be immediately fed into the ERP system to adjust reorder levels.

Transparency across the Supply Chain

StockWise helps to quantify excess inventory in real-time, pre-empts stock outs while pointing out optimum re-order quantity levels and how much to order at all levels of the supply chain.

What we have achieved

50% REDUCTION IN INVENTORY
FOR A LEADING MOBILE STORE
CHAIN.

INCREASED SALES BY 15% FOR A
GROCERY CHAIN.

REDUCED PURCHASE BY 10% FOR
A PHARMACY RETAIL CHAIN.
